

IBM Storage Fusion

All together now. Discover how five foundational data services help organize, catalog, protect, move and safeguard your Red Hat® OpenShift® application data.

1 Data persistence

Automated for the people. IBM® Storage Fusion delivers persistent data services that enable your Red Hat OpenShift data to be automatically provisioned the same way compute services are automated natively by Red Hat OpenShift—no matter the data type.

2 Data resilience

Disrupt disruption. Back up and recover your Red Hat OpenShift data where and when you need it with IBM Storage Fusion. Discover a range of comprehensive options designed to ensure your data is available during disruptive events or system failures.

3 Data security

As you were. With IBM Storage Fusion, get back to business with end-to-end data encryption, retention and recovery, providing protection from unintentional data loss or malware and ransomware cyberattacks.

4 Data mobility

Go with the flow. With cloud-native computing, apps need to run from edge to cloud to core. IBM Storage Fusion enables your Red Hat OpenShift applications and data to move together between environments—all without any changes to the code.

5 Data cataloging

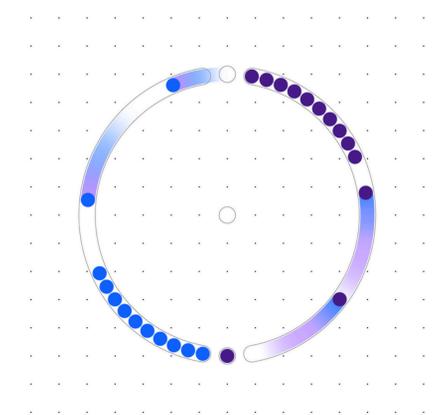

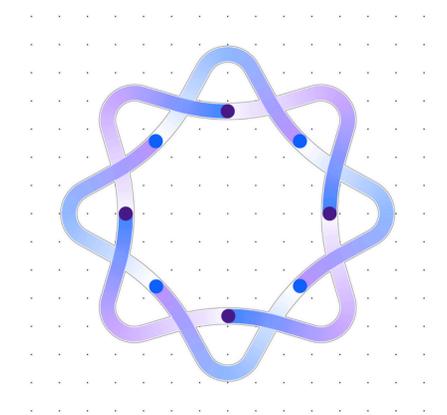

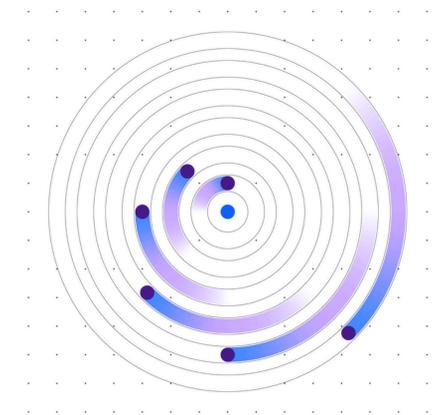

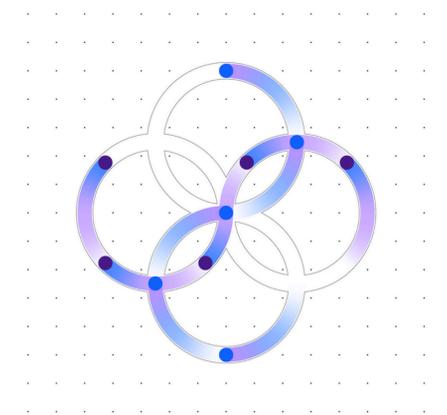

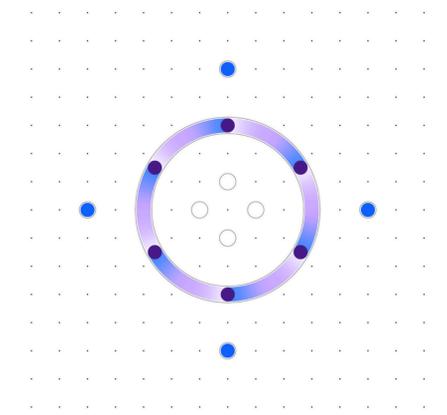

Shift to simplicity. Experience a streamlined way to gain actionable data insights. IBM Storage Fusion transforms the way data scientists implement metadata curation and data insights with data visualization for massive, unstructured data repositories. IBM Storage Fusion goes beyond cataloging by accelerating AI data and hosting the IBM watsonx™ AI and data platform.
